§ 400.52 Definitions.

In addition to the definitions contained in the crop insurance contract, the following definitions apply for the purposes of the APH Coverage Program:

(a) *APH*—Actual Production History.

(b) *Actual yield*—The yield per acre for a crop year calculated from the production records or claims for indemnities. The actual yield is determined by dividing total production (which includes harvested and appraised production) by planted acres for annual crops or by insurable acres for perennial crops.

(c) *Adjusted yield*—The transitional or determined yield reduced by the applicable percentage for lack of records. The adjusted yield will equal 65 percent of the transitional or determined yield, if no producer records are submitted; 80 percent, if records for one year are submitted; and 90 percent, if two years of records are submitted.

(d) *Appraised production*—Production determined by the Agricultural Stabilization and Conservation Service (ASCS), the FCIC, or a company reinsured by the FCIC, that was unharvested but which reflected the crop's yield potential at the time of the appraisal. For the purpose of APH "appraised production" specifically excludes production lost due to uninsurable causes.

(e) *Approved APH yield*—A yield, calculated and approved by the verifier, used to determine the production guarantee and determined by the sum of the yearly actual, assigned, and adjusted or unadjusted transitional or determined yields divided by the number
